

SHAIKH MOHAMMED SHAHRUKH

Angular Developer · Frontend Engineer · FinTech / BFSI

+91 7304744955 • shahrughshaikh3413@gmail.com • <https://www.linkedin.com/in/shaikhmohammadshahrugh/> • Mumbai, India

Summary

Angular Frontend Developer with 3+ years of experience building scalable, config-driven web applications for BFSI and FinTech domains. Specialized in Angular (12–17), TypeScript, RxJS, and Reactive Forms; delivering JSON-driven loan origination platforms across Gold, Solar, and Two-Wheeler lending journeys on a unified admin ecosystem. Shipped three major product launches with zero P0/P1 production defects, reduced codebase duplication by 40%, and accelerated feature delivery by 30% through reusable RxJS-based calculation engines. Experienced in REST API integration, HTTP Interceptors, RBAC and Equifax Credit Bureau API. Contributed to MFE architecture planning, UI component standardization, and pre-QA developer testing practices. Seeking Angular Developer / Frontend Engineer roles in FinTech, BFSI, or product-driven environments.

Key Achievements

- | | | |
|--|---|--|
|  Codebase Duplication Reduction
Reduced codebase duplication by 40% using reusable RxJS calculation engines across projects. |  Feature Delivery Acceleration
Achieved 30% faster feature delivery using optimized Angular services and reactive streams. |  Page-Load Performance Boost
Improved page-load performance by 25% with nz-table migration. |
|--|---|--|

Experience

Homeville Group	Lower Parel, Mumbai
Software Engineer II, Angular Frontend	03/2024 - 01/2026

- Architected a JSON-config-driven Angular workflow engine for Gold, Solar, and Two-Wheeler loan journeys, consolidating 3 product codebases into a unified admin platform; achieving zero P0/P1 defects across all three production launches and processing 5,000+ loan applications.
- Built reusable RxJS-powered calculation engines (EMI, gold purity, loan eligibility) using Angular services and reactive streams, adopted across 3 lending journeys; cutting shared codebase duplication by 40% and compressing feature delivery cycles by 30%.
- Led Angular UI standardization by migrating from Angular Material Data Table to ng-zorro (nz-table) and delivering Key Fact Statement (KFS) journey flows; improving page-load performance by 25% and establishing a shared component library used by the full frontend team.
- Defined component API documentation and PR review standards for a 5-member Agile squad using JIRA; reducing new-developer onboarding time by 20% and measurably improving first-PR code quality.
- Designed a Micro Frontend (MFE) module-federation boundary map separating Gold, Solar, and Two-Wheeler journeys into independently deployable Angular feature modules; adopted as the baseline MFE rollout strategy by the tech lead.

Homeville Group	Lower Parel, Mumbai
Software Engineer I, Angular Frontend	07/2023 - 03/2024

- Led end-to-end Angular migration of the SNG platform; porting loan terms, document vault, and collections modules from a legacy system to a modern Angular stack across 4 modules, delivered on schedule with zero scope cuts while mentoring a junior intern to their first independent PR
- Integrated the Equifax Commercial Credit Bureau REST API into the Angular loan origination flow; automating creditworthiness checks that eliminated manual lookups and cutting document re-request cycles by 35%
- Built co-lending loan terms, inventory management, and BRE workflow modules using Angular, TypeScript, and REST API integrations for BHN and Velocity platforms; directly enabling 2 new lending partner business lines at launch
- Instituted pre-QA developer testing with Jasmine and Karma across the frontend team; proactively catching UI defects before QA handoff, reducing bug turnaround time by 40% and shortening sprint closure delays

Homeville Group	Lower Parel, Mumbai
Software Engineer Intern, Angular	01/2023 - 06/2023

- Delivered 12 production-ready Angular features; including Reactive Forms validators, config-driven loan UIs, HttpClient-based REST API integrations, and reusable UI components; within a 6-month internship, earning a full-time offer on completion.

Aliz Tours Full-Stack Travel & Tourism Platform	Mumbai
React.js, TypeScript/JavaScript, HTML5, CSS3/SCSS, REST APIs, Node.js, Database	08/2026 - Present

- Developing a responsive travel and tourism platform for showcasing destinations, tour packages, accommodations, and travel services.
- Building reusable, component-based UI architecture with responsive layouts for desktop, tablet, and mobile devices.
- Integrating frontend components with backend APIs for dynamic content and data management.
- Implementing user workflows for tour exploration, inquiries, and booking-related interactions.
- Optimizing application performance, usability, and maintainability through reusable components and clean architecture.

Skills

Angular 12–17 · TypeScript · JavaScript ES6+ · RxJS · Observables · Subjects · BehaviorSubject · Signals

Forms & UX:

Reactive Forms · FormBuilder · FormGroup · FormArray · Custom & Async Validators · ControlValueAccessor · Dynamic / Config-Driven Forms · Angular Material · ng-zorro-antd · Bootstrap 5 · HTML5 · CSS3 · SCSS · Responsive Design

Architecture:

Lazy Loading · OnPush Change Detection · Standalone Components · JSON-Config Architecture · Module Federation (MFE) · Tree Shaking · Code Splitting · Angular Router · ViewChild · ContentChild · ChangeDetectorRef
